Fossils Div B

This test will begin at 6:00pm. The first slide will ask you for your school, team and team members. 1 person should submit answers for the team. Once the section gets to 0:00, the test moves on but DOES record the answers you have clicked.

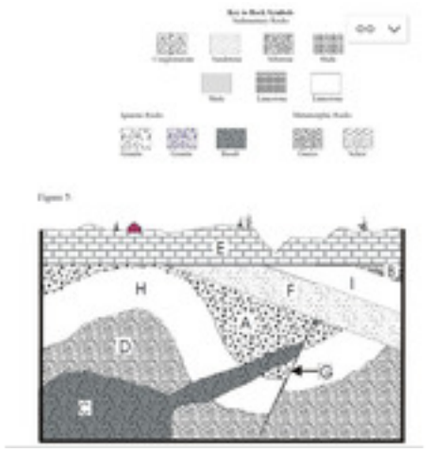
Open Ended Question

Please list your School Name, Team (V, JV1, JV2, JV3), and team member FIRST names.
Don't forget to hit submit to record your answers before the timer gets to 0:00.

Please enter your answer here.

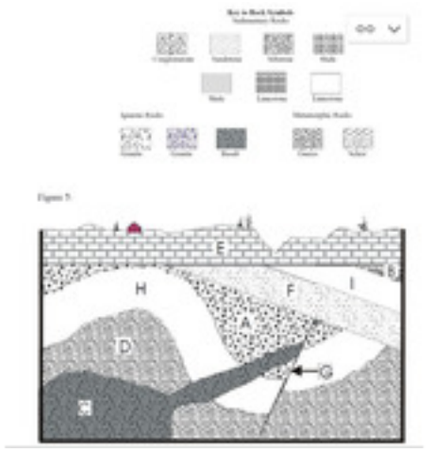
Quiz

Section 1



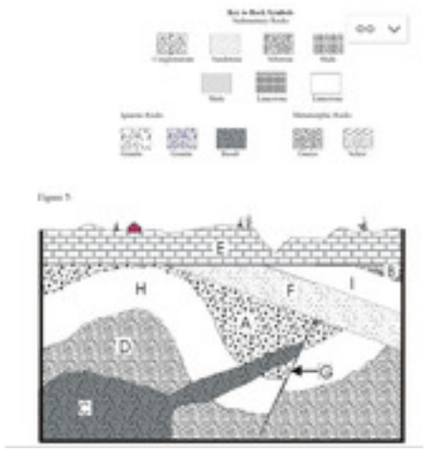
Use the picture to answer the following questions. You can click on it to make it bigger. Which layer of rock listed is the YOUNGEST?

- B
- C
- E
- F
- I



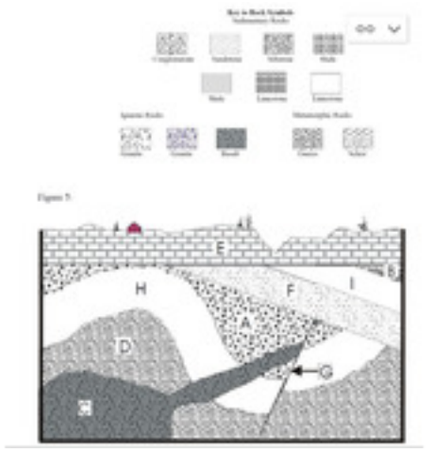
Use the picture to answer the following questions. You can click on it to make it bigger. Which layer of rock listed is the YOUNGEST?

- C
- F
- G
- H
- I



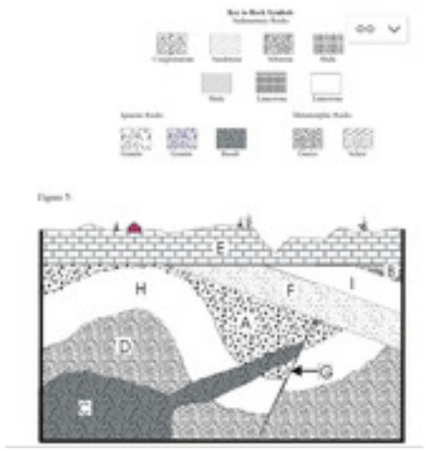
Use the picture to answer the following questions. You can click on it to make it bigger. Which layer of rock listed is the YOUNGEST?

- A
- C
- D
- G
- H



Use the picture to answer the following questions. You can click on it to make it bigger. Which layer of rock listed is the YOUNGEST?

- A
- C
- D
- G
- H



Use the picture to answer the following questions. You can click on it to make it bigger. What law or principle helps to determine the relative age of layer F?

- Law of Superposition
- Law of Crosscutting relationships
- Principle of Intrusive Relationships
- Principle of Lateral Continuity

Quiz

Section 2

Which of the following happened FIRST in Geologic history?

- Coal-Forming Swamps
- **Appearance of Flowering Plants**
- Earth’s Largest Extinction

Which of the following happened FIRST in Geologic history?

- Breakup of Pangea
- Dinosaurs Diverse and Abundant
- Kellwasser/Hangenberg Events

Which of the following happened FIRST in Geologic history?

- First Terrestrial Plants
- Age of Fish
- First Amphibians

Match the correct extinction event that corresponds to the correct description. Glaciation and ocean anoxia (i.e. depletion of ocean dissolved oxygen) are thought to have caused this mass extinction.

- **Quaternary Extinction**
- Ordovician-Silurian Extinction
- **Devonian Extinction**
- Permian-Triassic Extinction
- Triassic-Jurassic Extinction
- Cretaceous-Tertiary (or Cretaceous Paleogene) Extinction

Match the correct extinction event that corresponds to the correct description. Dinosaurs went extinct.

- **Quaternary Extinction**
- Ordovician-Silurian Extinction
- **Devonian Extinction**
- Permian-Triassic Extinction
- Triassic-Jurassic Extinction
- Cretaceous-Tertiary (or Cretaceous Paleogene) Extinction

Match the correct extinction event that corresponds to the correct description.
Megafauna (e.g. wooly mammoths) went extinct.

- **Quaternary Extinction**
- Ordovician-Silurian Extinction
- **Devonian Extinction**
- Permian-Triassic Extinction
- Triassic-Jurassic Extinction
- Cretaceous-Tertiary (or Cretaceous Paleogene) Extinction

Match the correct extinction event that corresponds to the correct description. Evidenced in the geologic record by a thin layer of iridium in many marine and terrestrial rocks.

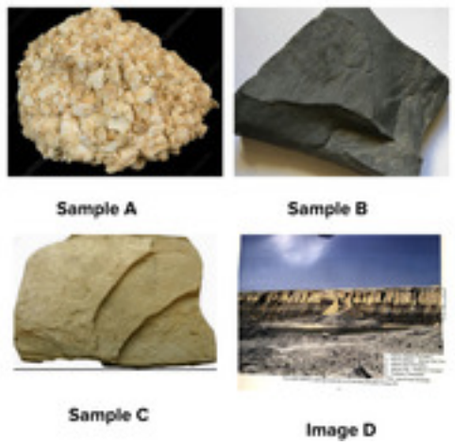
- **Quaternary Extinction**
- Ordovician-Silurian Extinction
- **Devonian Extinction**
- Permian-Triassic Extinction
- Triassic-Jurassic Extinction
- Cretaceous-Tertiary (or Cretaceous Paleogene) Extinction

Match the correct extinction event that corresponds to the correct description.
Greatest extinction event that wiped out the most marine genera out of all the major extinction events.

- **Quaternary Extinction**
- Ordovician-Silurian Extinction
- **Devonian Extinction**
- Permian-Triassic Extinction
- Triassic-Jurassic Extinction
- Cretaceous-Tertiary (or Cretaceous Paleogene) Extinction

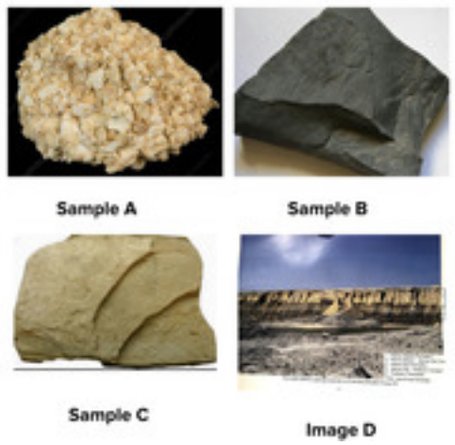
Quiz

Section 3



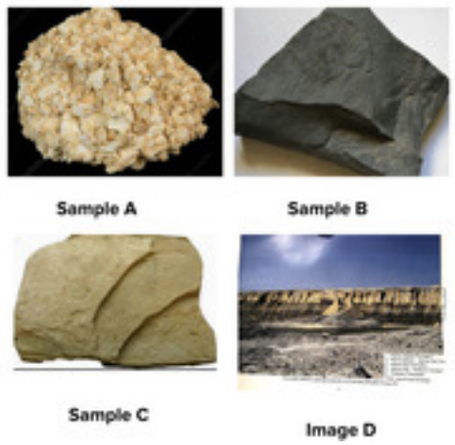
Sample A is a picture of:

- Sandstone
- Coquina
- Shale
- Siltstone



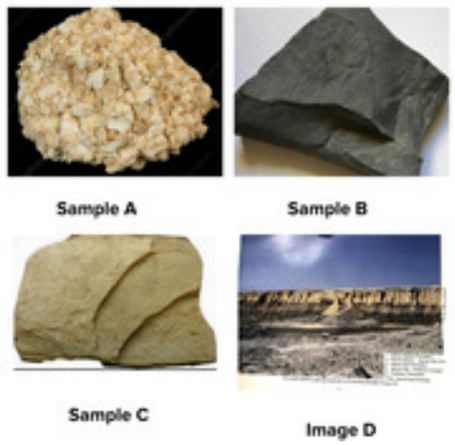
Is sample A an example of a clastic or biochemical rock?

- Clastic
- Biochemical



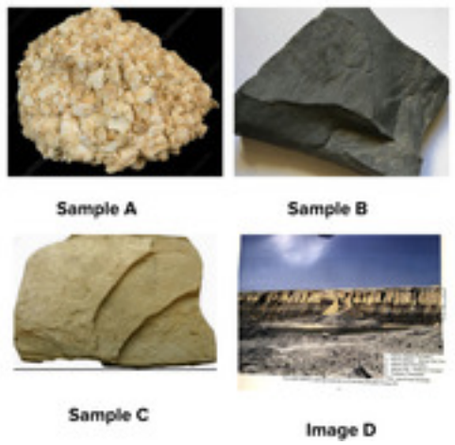
Sample B is a picture of:

- Sandstone
- Coquina
- Shale
- Siltstone



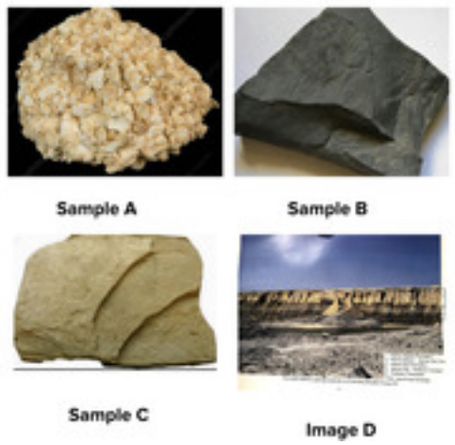
Is sample B an example of a clastic or biochemical rock?

- Clastic
- Biochemical



Which one of these samples will most likely react with HCl?

- A
- B
- C
- D



What is Sample A typically made of?

- small rocks and sand
- organic material from plants
- shells and sediments
- siliceous ooze from single celled organisms

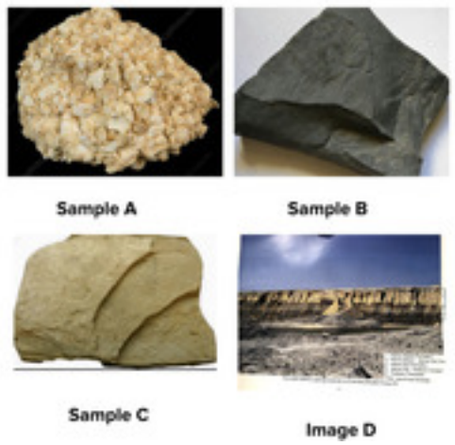


Image D demonstrates the different layers called:

- bands
- strata
- horizons
- foliations

Fossils are found in all three rock types.

- True
- False

Quiz

Section 4

Fossil A

Fossil B Fossil C

What is the Genus for the specimen A?

- Otodus
- Carcharocles
- Carcharodon
- Lamnidae
- Otodontidae
- Cosmopolitodus

Fossil A

Fossil B Fossil C

What is its Species for the specimen A?

- Megalodon
- Sokolovi
- Chubutensis
- Carcharias
- Hastalis

What is the common name for the modern counterpart for the specimen A shown in the bottom right?

- Bull shark
- Hammerhead Shark
- Goblin Shark
- Great White Shark
- Whitetip Shark

What time period was this specimen A most likely present?

- Early Pliocene
- Early Miocene
- Late Pliocene
- Early Pleistocene
- Late Miocene

Fossil A

Fossil B Fossil C

Which specimens are in the same Genus?

- A & B
- A & C
- B & C

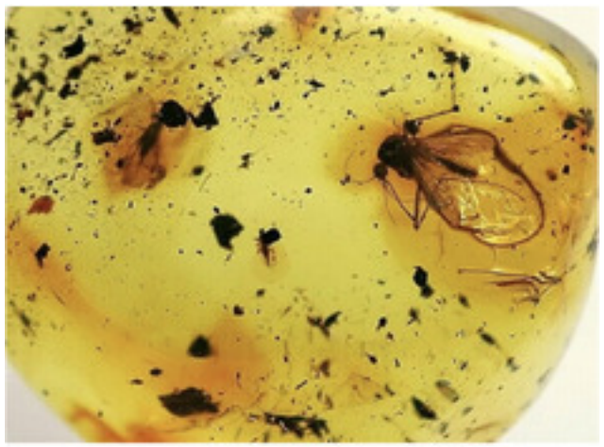
Fossil A

Fossil B Fossil C

What genus do they both belong to?

- Otodus
- Carcharocles
- Carcharodon
- Lamnidae
- Otodontidae
- Cosmopolitodus

Open Ended Question



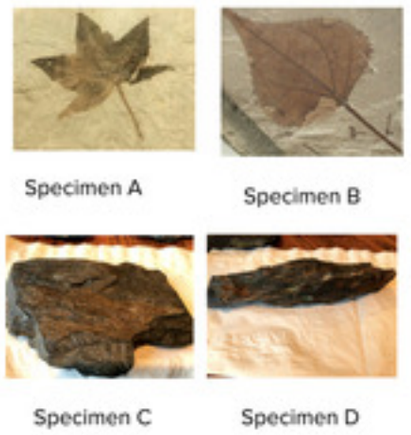
(2pts) 1. What is the pictured material that this organism is trapped in called? 2. Identify the class of the organism trapped in the material of the Specimen. Number your answers and don't forget to hit submit before the timer gets to 0:00.

Please enter your answer here.

Amber. Class Insecta

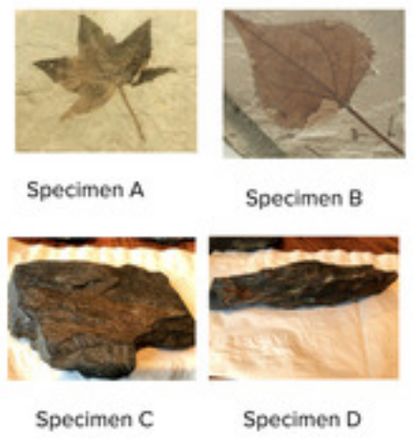
Quiz

Section 5



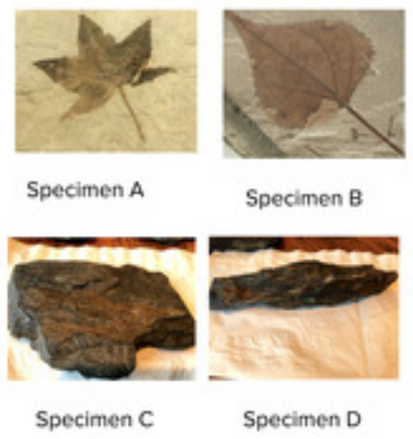
What is the genus of Specimen A?

- Acer
- Lepidodendron
- Platamus
- Populus



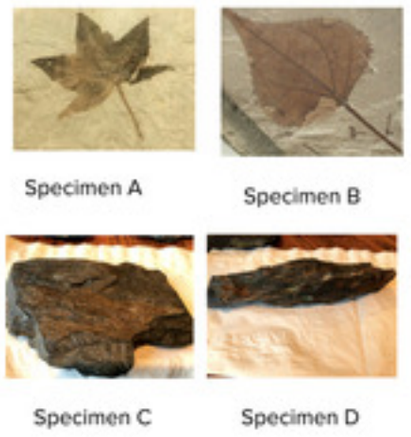
What type of leaf arrangement is the genus of specimen A distinguished by?

- Alternate
- Opposite
- Spiral
- Whorled



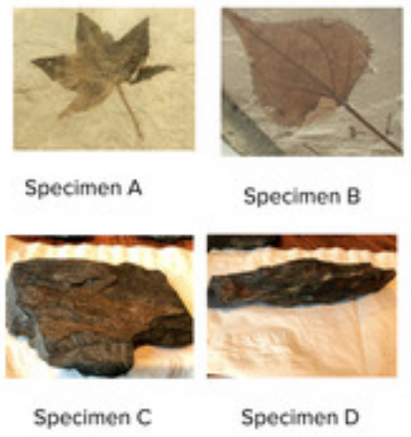
What type of leaf arrangement is the genus of specimen A distinguished by?

- Alternate
- Opposite
- Spiral
- Whorled



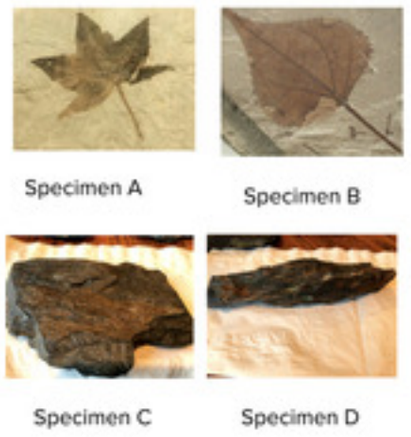
What is the genus of Specimen B?

- Acer
- Lepidodendron
- Platamus
- Populus



Specimen B’s genus has been separated into 6 separate sections based on leaf and flower characteristics.

- True
- False



Specimen D can be classified as:

- Burrow
- Coprolite
- Petrified Wood
- Trail

Match each phylum to the correct derived trait (a derived trait is a trait that is present in this phylum but not in its ancestors). Pinophyta

- Seeds enclosed in fruit
- Seeds
- Vascular Tissue

Match each phylum to the correct derived trait (a derived trait is a trait that is present in this phylum but not in its ancestors). Anthophyta

- Seeds enclosed in fruit
- Seeds
- Vascular Tissue

Match each phylum to the correct derived trait (a derived trait is a trait that is present in this phylum but not in its ancestors). Pteridophyta

- Seeds enclosed in fruit
- Seeds
- Vascular Tissue

Quiz

Section 6

Specimen A (two pictures)

Specimen A is a coral with many barnacles attached. While the barnacles can capture passing detritus thanks to their position on the coral, the corals are not affected at all by the barnacles' presence. This relationship is called:

- Mutualism
- Commensalism
- Parasitism
- Leeching
- Seeding

Specimen A (two pictures)

Which of the following is FALSE about trilobites?:

- They could have been carnivores
- They could have been scavengers
- They could have been detritivores
- They could have been decomposers

Specimen A (two pictures)

Which mode of life BEST characterizes Porifera?

- Sessile benthic
- Sessile infaunal
- Sessile pelagic
- Sessile motile

Specimen A (two pictures)

Sponges can only reproduce asexually.

- True
- False

Specimen A (two pictures)

Typical adult members of Phylum Asteroidea have tetra-radial symmetry.

- True
- False

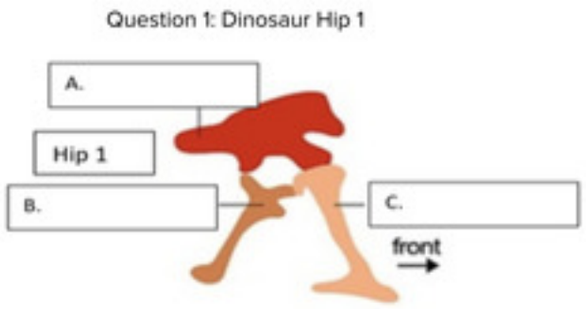
Specimen A (two pictures)

Invertebrate life appeared on Earth before vertebrate life did.

- True
- False

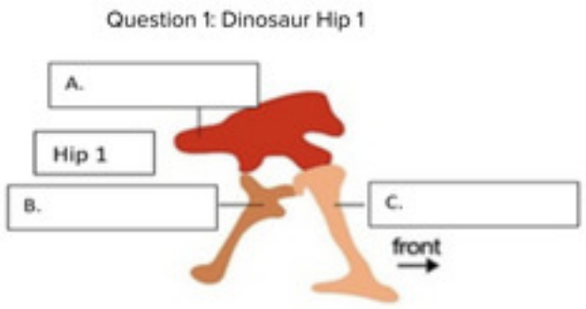
Quiz

Section 7



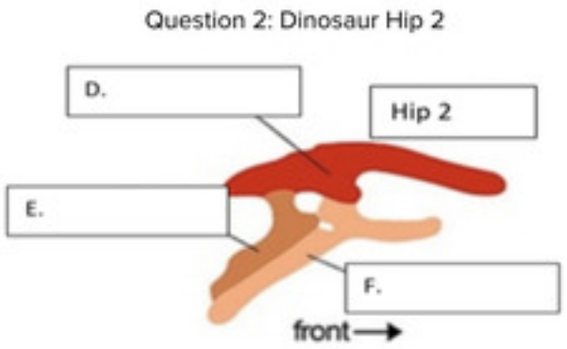
What anatomical part is shown at A?

- Ilium
- Scapula
- Pubis
- Ischium



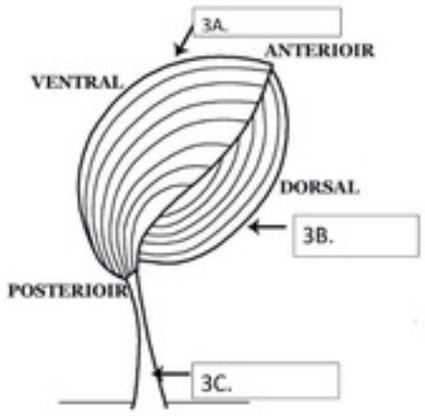
What anatomical part is shown at C?

- Ilium
- Scapula
- Pubis
- Ischium



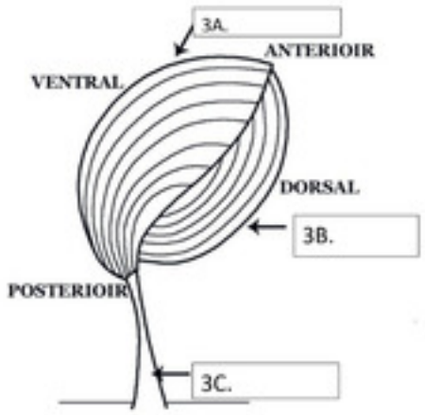
What anatomical part is shown at E?

- Ilium
- Scapula
- Pubis
- Ischium



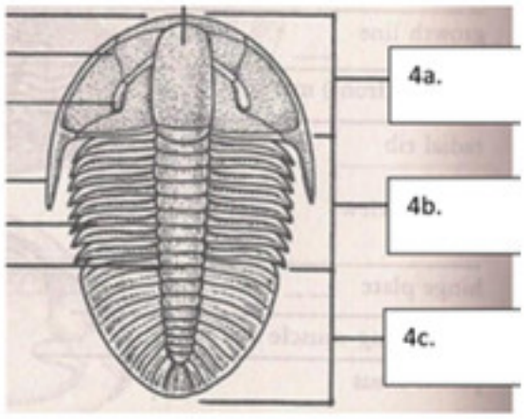
What anatomical part is shown at 3A?

- Pedicular Valve
- Pedicle
- Brachial Valve
- Socket Wall



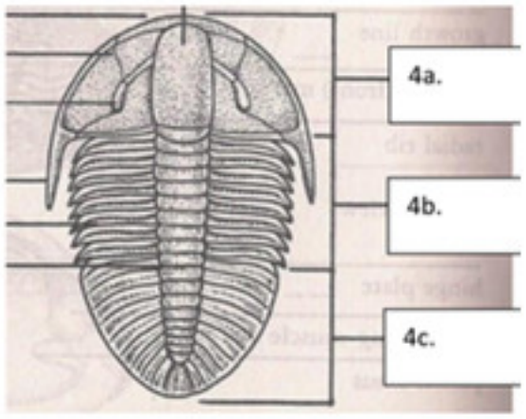
What anatomical part is shown at 3B?

- Pedicular Valve
- Pedicle
- Brachial Valve
- Socket Wall



What anatomical part is shown at 4A?

- Cephalon
- Thorax
- Pygidium
- Nephridium

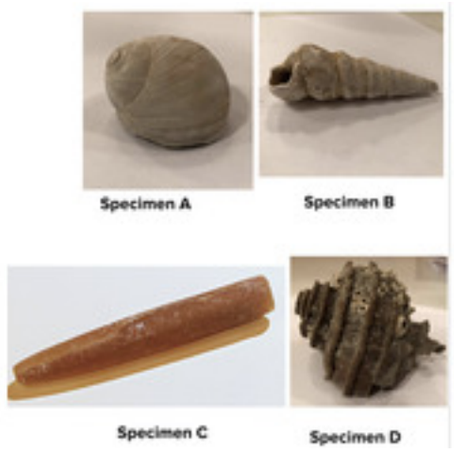


What anatomical part is shown at 4B?

- Cephalon
- Thorax
- Pygidium
- Nephridium

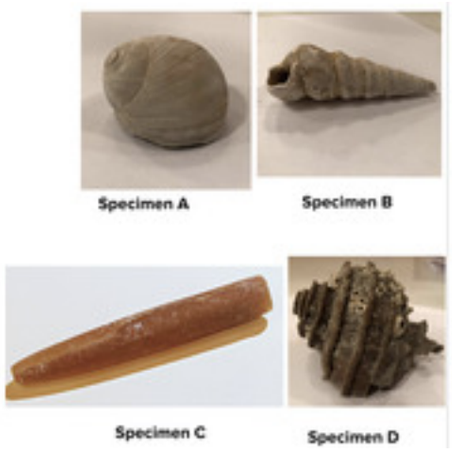
Quiz

Section 8



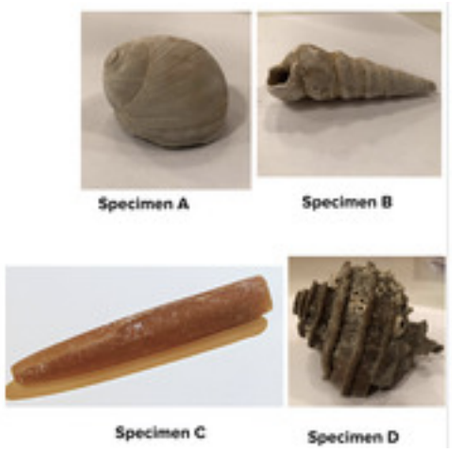
What is the Class of Specimen A?

- Articulata
- Bivalva
- Cephalopoda
- Gastropoda



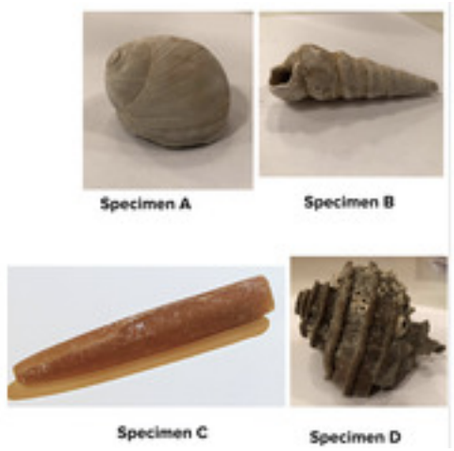
What is the Genus of Specimen B?

- Conus
- Cypraea
- Turritella
- Worthenia



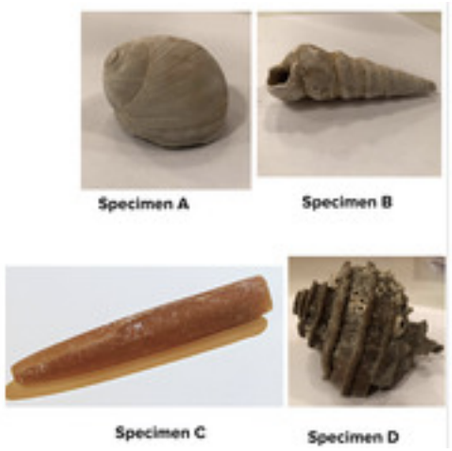
What is the Genus of Specimen C?

- Baculites
- Belemnitella
- Pecten
- Worthenia



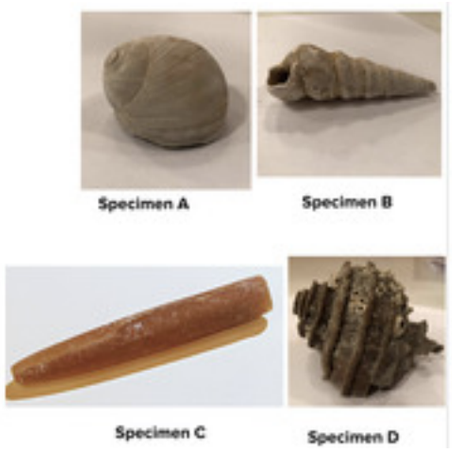
What Phylum do all four species belong to?

- Gastropoda
- Invertebrata
- Mollusca
- Non-Chordata



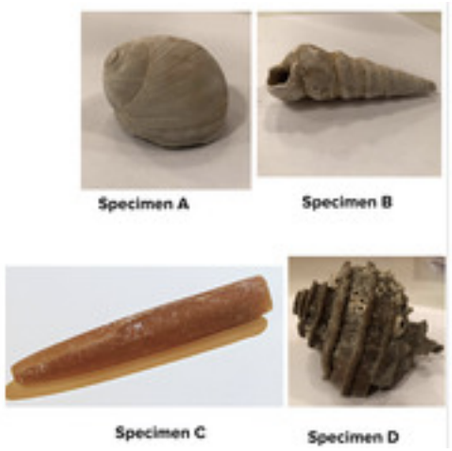
Species D is the state fossil of which state?

- Georgia
- North Carolina
- South Carolina
- Virgina



The part of the organism that fossilized into Specimen C is called the rostrum.

- True
- False



What is the purpose of the siphuncle in cephalopod mollusks?

- It works as a digestive system.
- It holds the ink sac used for protection against predators.
- It is needed to adjust buoyancy.
- It is the reproductive organ of the organism.

Open Ended Question

(3pts) What is the difference between filter feeders and suspension feeders? Don't forget to hit Submit before the timer gets to 0:00 to record your answer.

Please enter your answer here.

Many active suspension feeders are often referred to as 'filter feeders' because they pump water through a structure that functions as filter, removing particles from suspension.

Quiz

Section 9

Match the following types of preservations to its definition: Carbonization

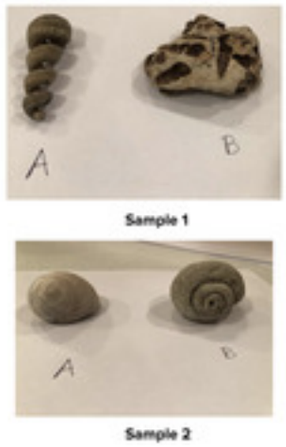
- Cavity is filled with the mineral remains
- Converting organic matter into carbon
- Impression of organism in rock
- Organic matter replaced by minerals

Match the following types of preservations to its definition: Cast

- Cavity is filled with the mineral remains
- Converting organic matter into carbon
- Impression of organism in rock
- Organic matter replaced by minerals

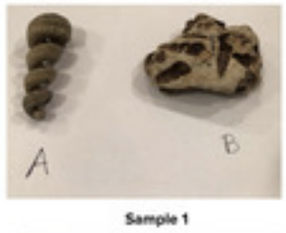
Match the following types of preservations to its definition: Petrification

- Cavity is filled with the mineral remains
- Converting organic matter into carbon
- Impression of organism in rock
- Organic matter replaced by minerals



In Sample 1, which fossil is an example of a CAST?

- A
- B

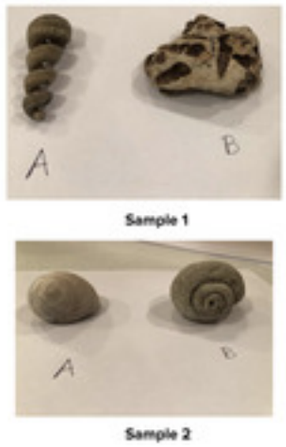


Sample 1

Sample 2

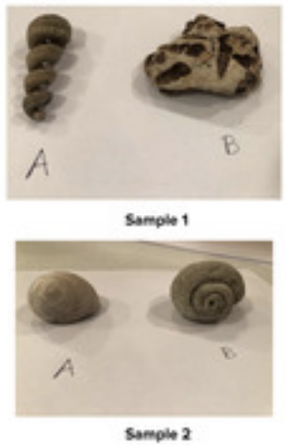
In Sample 2, which fossil is an example of a MOLD?

- A
- B



Identify the genus of Specimen A in Sample 1.

- Turritella
- Conus
- Cypraea
- Platyceras



Which of the pictured specimens is a steinkern?

- Specimen A in Sample 1
- Specimen B in Sample 1
- Specimen A in Sample 2
- Specimen B in Sample 2

Quiz

Section 10

Trilobites that could secrete explosive nitroglycerin gel into the water to deter predators were more successful in surviving than trilobites that rolled up.

- True
- False

During the Cretaceous, gymnosperms and insect pollinators coevolved to have a mutualistic relationship.

- True
- False

Cnidarians had stinging cells called cnidocytes to capture prey and ward off predators.

- True
- False

Mastodon teeth had flat chewing surfaces, which allowed them to become herbivorous browsers.

- True
- False

Ginkgo and the Coelacanth are examples of living fossils.

- True
- False

Conus (cone snails) have venomous barbed stingers that can inject toxic peptides into prey or as a defense against predators.

- True
- False

Soft part preservation indicates that extinct ammonites had the ability to shoot ink, like some modern cephalopods.

- True
- False

Dimetrodon, an apex predator during the Early Permian, had neural spines could be ejected like a harpoon to capture fish and small tetrapods for food.

- True
- False

Velociraptor’s small size allowed it to adapt and avoid going extinct in the K-T extinction.

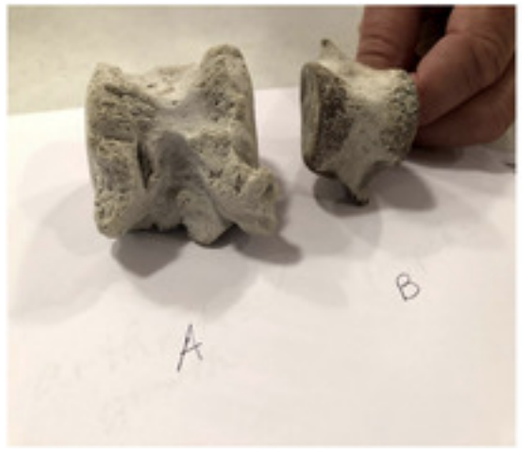
- True
- False

Halysites corals utilized stinging tentacles to catch plankton for food.

- True
- False

Quiz

Section 11

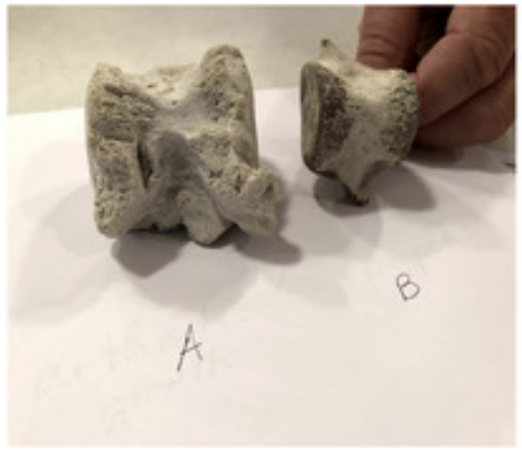


What is the Phylum for this sample?

- Chordata
- Arthropoda
- Cnidaria
- Anthophyta

The fossils in the first question could have come from this species. What is the class of this species?

- Agnatha
- Placodermi
- Osteichthyes
- Sarcopterygii



Both items are from the same species. Why is image A different from Image B, which is a normal sample?

- Sample A was crushed in a fight or accident
- Sample A had a disease or arthritis
- Sample A was smashed in the fossilization process

What type of consumer is this species?

- Filter feeders
- Grazers
- Scavengers
- Suspension feeders

In what habitat did this species live?

- Benthic
- Littoral
- Pelagic
- Terrestrial

Which mode of life best fits this species?

- Benthic
- Nektonic
- Planktonic
- Infaunal

Quiz

Section 12

Which one of these options is the correct definition for an index fossil?

- **A fossil that can give the exact numerical age of a rock sample.**
- **A fossil that is useful for dating and correlating the strata in which it is found.**
- A genus that has been cataloged, hence “indexed,” by the US government’s paleontological database.
- **A rare type of fossil that can only be found at Lagerstatten.**

Which of these features would make for a good index fossil?

- It lived during many time periods
- It's difficult to identify and rare to find
- It had a cosmopolitan distribution
- It lived in acidic water
- It was a scavenger

Ammonites are good index fossils.

- True
- False

Which one of these fossils would be the best choice for an index fossil for identifying marine rock from the Paleozoic Era?

- Ammonites
- Gastropods
- Scallops (Pecten)
- Trilobites

Which one of these fossils would be the best choice for an index fossil for identifying marine rock from the Mesozoic Era?

- Ammonites
- Graptolites
- Mucrospirifer
- Trilobites

Quiz

Section 13

Which mineral replaced the original parts in this ammonite (specimen A)?

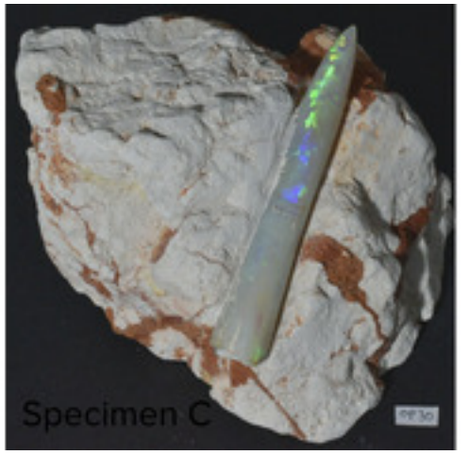
- Brass
- Bronze
- Copper
- Gold
- Pyrite

Some sponge spicules, corals, and forams are all composed of this substance.

- Biological Apatite
- Calcium Carbonate ($CaCO_3$)
- Cartilage
- Collagen
- Iron (Fe)

The corals (specimen B) fossilized via this process:

- Agatization
- Aragonitization
- Carbonization
- Opalization
- Pyritization



The mollusk (specimen C) pictured fossilized via this process:

- Agatization
- Carbonification
- Iridescence Permeation
- Opalization
- Quartz Permeation

Vertebrate teeth enamel naturally contain this substance:

- Aragonite
- Calcium Carbonate
- Hydroxyapatite (Calcium Phosphate)
- Silica

Quiz

Section 14

Match the Lagerstatten to the correct description. Fossil deposits correlate to the Cambrian-age Stephen Formation, composed of dark shale.

- Beecher's Trilobite Bed
- **Burgess Shale**
- **Ghost Ranch**
- **Green River Formation**
- **Mazon Creek**
- **Yixian Formation**

Match the Lagerstatten to the correct description. A large “graveyard” of Coelophysis was discovered at this site, and this site is overall known for a notable concentration of preserved Coelophysis

- Burgess Shale
- Ghost Ranch
- Green River Formation
- La Brea Tar Pits
- Mazon Creek
- Solnhofen Limestone

Match the Lagerstatten to the correct description. You could find the fish fossil pictured to the right, and other fish fossils, at this site's high yield split fish layer.

- Beecher's Trilobite Bed
- **Ghost Ranch**
- **Green River Formation**
- **La Brea Tar Pits**
- **Mazon Creek**
- **Yixian Formation**

Match the Lagerstatten to the correct description. Notable for discoveries of non-avian feathered theropod dinosaurs.

- Beecher's Trilobite Bed
- **Ghost Ranch**
- **Green River Formation**
- **Mazon Creek**
- **Solnhofen Limestone**
- **Yixian Formation**

Match the Lagerstatten to the correct description. Archaeopteryx was discovered here, and exceptional preservation contributed evidence to suggest that Archaeopteryx was a feathered dinosaur.

- Beecher's Trilobite Bed
- **Burgess Shale**
- **La Brea Tar Pits**
- **Mazon Creek**
- **Solnhofen Limestone**
- **Yixian Formation**

Match the Lagerstatten to the correct description. Known for fossils that are preserved by pyrite replacement (pyritization). This site has low organic content and a high dissolved iron concentration.

- Beecher's Trilobite Bed
- Burgess Shale
- La Brea Tar Pits
- Mazon Creek
- Solnhofen Limestone
- Yixian Formation

Match the Lagerstatten to the correct description. Located in modern-day Los Angeles, California. Asphalt deposits trapped and preserved very unlucky animals.

- Beecher's Trilobite Bed
- **Ghost Ranch**
- **Green River Formation**
- **La Brea Tar Pits**
- **Mazon Creek**
- **Yixian Formation**

Match the Lagerstatten to the correct description. You could find the fossils preserved in concretions like the one pictured to the right at this site.

- Beecher's Trilobite Bed
- **Ghost Ranch**
- **Green River Formation**
- **Mazon Creek**
- **Solnhofen Limestone**
- **Yixian Formation**

Quiz

Section 15

Of the following options, which one are modern humans most closely related to?

- Megalodon Shark
- Starfish
- Lobster
- Bacteria

Triceratops was:

- A browser
- An herbivore
- A scavenger
- A carnivore

Stromatolites form in part due to biofilms secreted by zooplankton.

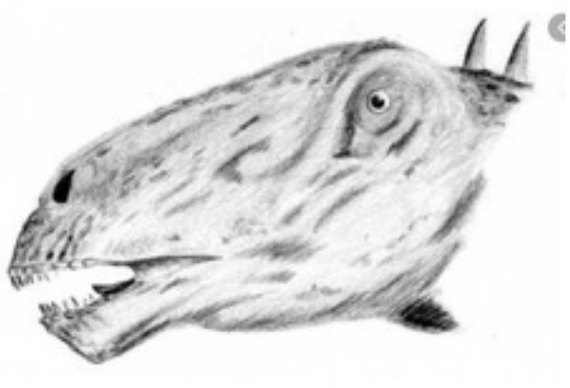
- True
- False

Identify the genus of this specimen.

- Parasaurolophus
- Spinosaurus
- Maiasaura
- Diplodocus

Identify the genus of this specimen.

- Parasaurolophus
- Spinosaurus
- Maiasaura
- Diplodocus



Identify the genus of this specimen.

- Parasaurolophus
- Spinosaurus
- Maiasaura
- Diplodocus

This species had an excellent sense of smell.

- True
- False

Herbivorous dinosaurs with long necks, such as Brachiosaurus, were grazers.

- True
- False

You are done!
